

## CFSW. hinge with built-in safety multiple switch: IMQ and UL certified compliance

✓ IMQ certification

✓ UL certification

Fig.1

Conformity to international regulations and observance of the highest standards imposed by the bodies of the sector are now a prerequisite for any product intended for safeguarding highly-automated workplaces, such as machine guards.

For this reason the **CFSW.** safety hinge, designed and produced by Elessa, comes with **certification no. CA02.04800** obtained from **IMQ\***, Italy's leading organization in conformity assessment, and with **certification no. E360222** awarded by **UL\*** (Underwriters Laboratories), the most authoritative certification body for the North American market.

For machinery manufacturers, users and Public Authorities, IMQ and UL certification provides a **real guarantee of product quality and functionality**.

Indeed, the certification marks (Fig.1) placed on each CFSW. hinge confirm that the product has been subjected to numerous severe tests by bodies that are completely independent to the manufacturer and which certify **compliance** of the hinge to **the safety requirements of international standards** in force in most industrialised countries (especially Europe, USA and Canada).

Conformity of the CFSW. hinge is guaranteed over time by constant vigilance of IMQ and UL.

To view the certificates click on the names of the respective institutes **IMQ** and **UL** and type in "Elesa" in the "Company Name" field.

*\* For features approved by IMQ and UL, please refer to the technical data sheet.*
