

PR-PF, EPR and ERB. flush pull handles

The most complete range of flush pull handles for doors and panels of machines and protection devices.

Elesa+Ganter introduce the new PR-PF handle series, the latest addition to its broad range of flush pull handles: the ideal solution to meet the different needs of designers of industrial machines and protection devices.

PR-PF flush pull handles snap-in assembly series allows to reduce space, without giving up the traditional ergonomics of Elesa+Ganter handles.

The snap-in assembly allows to reduce the assembly process with no need to drill holes in the metal sheet.

PR-PF series is available in self-extinguishing technopolymer AE-V0 and in three different colours: black, orange and grey.

Standard sizes available: 92 and 137 mm.

EPR handles offer three different solutions:

- EPR-PF series, with snap-in assembly (sizes 90, 110 and 120 mm)
- EPR-SH series, assembled with two screws and screw covers in six ERGOSTYLE® colours (sizes 110 and 120 mm)
- EPR/F-SH series, with flap, assembled with two screws and screw covers in six ERGOSTYLE® colours (size 120 mm).

In addition to the black technopolymer version, EPR-PF series handles are also available in white technopolymer similar to RAL 9002 and in self-extinguishing technopolymer AE-V0.

Particularly suitable for sliding doors, **ERB.** series of bi-directional handles completes the range.

These handles consist of two bodies that are assembled together by means of four screws.

Available in technopolymer, black and white similar to RAL 9002 in a single size of 130 mm.

Product data sheets, complete with drawings and tables with codes and dimensions, are available on the website
