

ELESA components become grey coloured

Grey colour for a perfect aesthetic integration

For some of its components in polyamide based technopolymer (PA) Elesa has recently proposed a new colour as an alternative to the traditional black: grey **RAL 7040**.

This is the alternative colour, created for those users who wish to harmonize the tonality of the component with the one of the aluminium profiles on which they are assembled.

CFA hinges, equipped with an AISI 303 rotating pin that ensures perfect corrosion resistance, are very versatile and are widely used in many applications.

CFG hinges with nickel-plated steel rotating pin, designed for applications on structures with two profiles and **CFI** double hinges, suitable for example when one central frame is connected with two lateral doors.

BMS and **BMS.L** snap door lock series (ELESA original design) have been designed for an easy and quick closure of swing doors.

BMS execution provides snap lock and unlock, while BMS.L execution provides snap lock and manual unlock by means of a lever which also serves as a handle grip. In both versions locking is guaranteed by a stainless steel spring.

STC square tube connectors are suitable for creating structures composed by square profiles. These connectors are characterized by an easy and quick assembly by simply forcing the connector inside the profile, with no need of screws or other fasteners.
