

New awards for the ELESa Italian design

ETH and MPR winners of the IF Design Award 2015

The [ETH-AN](#) tubular handle and the [MPR](#) folding handle with recessed tray and return spring have been awarded with the IF Design Award 2015, the international recognition conferred to those products that represent the best combination of industrial design – functionality.

ETH is the tubular handle of the ELESa Ergostyle line that, thanks to the tube diameter of 35 mm, offers a good and comfortable grip. The special expansion-assembly system between the tube and the handle shanks prevents the tube rotation and, together with the special design without edges and protrusions, allows to operate in complete safety.

Lightness and mechanical resistance are the characteristics of the **MPR** folding handle with recessed tray and return spring, made of polyamide based technopolymer, black colour. Equipped with stainless steel return springs from work to rest position, this handle has a special design studied to ensure a high resistance to lifting and tensile strength, in addition to a more comfortable grip. Furthermore, the special design without protrusions in the rest position ensures the maximum safety to the operator, thanks to the inner shape.

With these two new recognitions, Elesa now counts 37 Industrial Design awards.

Products technical data sheets, along with drawings and tables with codes and dimensions, are available on the website www.elesa-ganter.com.
